NOVEMBER 2024 DATA

FIRST AMERICAN® DATA & ANALYTICS

FRICE PRIDE

The First American Data & Analytics Home Price Index (HPI) tracks home price changes less than four weeks behind real time at the national, state and metropolitan Core-Based Statistical Area (CBSA) levels and includes metropolitan price tiers that segment sale transactions into starter, mid and luxury tiers.

50 State HPI

Highlights

- House prices nationally are now 54.7 percent higher compared to pre-pandemic levels (February 2020).
- House price growth reported in last month's HPI for September 2024 to October 2024 was revised down 0.03 percentage points, from -0.048 percent to -0.075 percent.

Chief Economist Analysis:

"After a nearly year-long slow down, national house prices re-accelerated modestly for the first time since December 2023 on an annualized basis, but remain in line with historical norms," said Mark Fleming, chief economist at First American. "As the housing market adjusts to the new normal of higher mortgage rates, buyers and sellers are gradually returning, supported by a healthy labor market and more homes for sale compared to last year. The result is steady, single-digit house price growth, reflecting a market returning to normal following the pandemic-to-post-pandemic roller-coaster ride."

^{*} CBSA Metropolitan Division

Price-Tier Highlights

The First American Data & Analytics HPI segments home price changes at the metropolitan level into three price tiers based on local market sales data: starter tier, which represents home sales prices at the bottom third of the market price distribution; mid-tier, which represents home sales prices in the middle third of the market price distribution; and the luxury tier, which represents home sales prices in the top third of the market price distribution.

"While some may have expected sustained higher mortgage rates to drive widespread house price declines, prices have proven resilient, falling in only two markets year over year last month," said Fleming. "House prices tend to be 'downside sticky,' because home sellers would rather withdraw from the market than sell at a discount."

HPI Methodology

The First American Data & Analytics HPI report measures single-family home prices, including distressed sales, with indices updated monthly beginning in 1980 through the month of the current report. HPI data is provided at the national, state and CBSA levels and includes preliminary index estimates for the month prior to the report (i.e. the preliminary result of July transactions is reported in August). The most recent index results are subject to revision as data from more transactions become available.

The HPI uses a repeat-sales methodology, which measures price changes for the same property over time using more than 46 million paired transactions to generate the indices. In non-disclosure states, the HPI utilizes a combination of public sales records, MLS sold and active listings, and appraisal data to estimate house prices. This comprehensive approach is particularly effective in areas where there is limited availability of accurate sale prices, such as non-disclosure states. Property type, price and location data are used to create more refined market segment indices. Real Estate-Owned transactions are not included.
